Interest is

$$\int Y f(Y \mid d) dY - \int Y f(Y \mid D, X) f(D \mid X) f(X \mid d) dY dD dX$$

Level

Interest is

$$\begin{aligned} & \int Y f(Y \mid D, X) f(D \mid X) f(X \mid d) dY dD dX \\ &= \int Y f(Y \mid X) f(X \mid d) dY dX \end{aligned}$$

Efficient influence function is

$$\begin{aligned} f(D = d) \phi &= I(D = d) E[Y \mid X] \\ &+ (Y - E[Y \mid X]) \times f(d \mid X) \end{aligned}$$
